DOUGLAS ...A 10-year Texaco user

DOUGLAS DC-7B, intercontinental version of the famous DC-7 airliner. Fuel capacity has been upped to 6,200 gallons — enough for a full-load, non-stop flight of 4,000 miles, with nearly 1,000 gallons of reserve fuel remaining. Powered by four Wright DA4 turbo-compound engines, the DC-7B has a cruising speed of over 360 m.p.h. and is said to be the world's fastest piston-powered airliner. Douglas Aircraft Company has lubricated engines on all its test flights for ten years with *Texaco Aircraft Engine Oil* exclusively.

For a decade now, Douglas Aircraft Company has relied exclusively on *Texaco Aircraft Engine Oil* for engine lubrication. There are many good reasons for this choice —

Texaco Aircraft Engine Oil more than meets the exacting requirements of piston-powered aircraft engines. Airline users of *Texaco Aircraft Engine Oil* have found, over the years, that it keeps engines clean and efficient, keeps piston rings free—wear at a minimum. This all adds up to operational dependability, and economy in both maintenance and fuel consumption.

And these are the reasons why—

For over 20 years, more scheduled revenue airline miles in the U. S. have been flown with Texaco Aircraft Engine Oil than with any other brand.
